ELSEVIER

Physica B 256–258 (1998) 667–670

PHYSICA B

Subject Index

2D electron gas 557
2D magneto transport 220
2DEGs 327
2DES 587
2DHS 587
Aharonov–Bohm effect 371
AlGaAs 544
Anderson model 182
Angular effect 633
Anomalous Hall effect 641
Anti-Stokes photoluminescence 553
Antidot array 60, 397
Antidot lattice 388, 409
Antidot shape 397

Band structure 486, 629
Bernstein modes 335
Bi-layer systems 130, 417
Bilayer electron systems 494
Bistability 531
Breakdown of quantum Hall effect 56, 499
Bulk and surface optical phonons 335
Bulk semiconductor 645

$Cd_{1-x}Mn_xTe$ 569
CdTe/CdMgTe 457
Chaotic quantum dot 198
Coherence volume 470
Coherent Raman spectroscopy 548
Coincidence measurements 260
Coincidence method 239
Collapse of quantized Hall resistance 56
Collective excitations 474
Commensurability oscillation 397
Composite fermions 215, 441
Conductance fluctuations 401, 413
Conducting state 582
Correlations 141
Coulomb coupling 452
Coulomb drag 220
Coupled 2DEGs 499
Crystal synthesis 618
Cs_2Cucl_4 637
Current distribution 60
Current oscillations 654
Current spin density-functional theory 147
Cyclotron resonance 292, 339, 343, 359, 445, 457, 565, 659

Delta-doping 243
Density wave 621
Diamagnetic shift 169, 363
Diamagnetic Shubnikov–de Haas effect 229
Diluted magnetic semiconductors 553, 565, 569
Dissipation 43
Doping superlattices 229
Double quantum wells 413, 452, 535, 553
Drag-effect 499
Dysprosium 392

Edge channels 1, 300
Edge magnetoplasmons 452
Edge states 78, 279
Edge tunneling experiment 125
e–e interaction 152
Effective electron mass 625
Elastic scattering 252
Electrical compressibility 1
Electrical noise 47
Electrical Transport 225
Electron billiards 595
Electron correlations 431
Electron cyclotron resonance 494
Electron interferometer 371
Electron spin resonance 637
Electron viscosity 47
Electron–electron interactions 283, 292, 494, 523
Electron–hole correlations 531
Electron–hole interaction 445
Electron-hole transport 300
Electronic states 375, 490
Electronic state exchange 577
Electronic structure 190
Electron–phonon interaction 292

Energy relaxation 8
ESR 569
Exchange 503
Exchange correlation 147
Exchange coupling 573
Exciton–polariton 331
Excitons 136, 477, 557
Extended state 161

Far-infrared 481
Far infrared absorption 256
Far-infrared spectroscopy 494
FEL 268
Fermi edge singularities 519
Field orientation effect 618
Field-induced confinement 633
Field-induced reentrant transition 621
FIR magneto-spectroscopy 431
Fractional quantum Hall effect 36, 82, 86, 104, 113, 121, 125, 490
Free-electron laser 339, 645

GaAs/AlAs 540
GaAs/AlGaAs heterostructure 78
GaAs/AlGaAs quantum wells 431
GaAs/AlGaAs 273, 347
GaAs–(Ga,Al)As heterojunctions 359, 363
GaAs 113, 121, 279, 544
GaAs heterojunction 104
(Ga,Mn)As 561, 573
$Ga_{1-x}Mn_xAs$ 569
GaN 659
GaSb/InAs 225
Glassy dynamics 69
Graphite 621

Hall voltage 587
Hall insulator 591
Hartree–Fock approximation 52
Heat capacity 90
Heterojunction 371, 595
Heterostructures 481
HgTe 486
High-frequency conductivity 74
High magnetic fields 233, 292, 308, 654
Hole gas 503
Hopping 540
Hopping conductivity 654
Hot electron avalanche 8
Hund's rule 157
Hybrid ferromagnetic/semiconductor devices 380
Hydrostatic pressure 359
Hyperfine interactions 641
Hysteresis 47, 343

Ice crystal 618
III–IV heterojunction 405
III–IV semiconductors 573
III structure 573
II–VI compounds 629
Impact ionization 654
impurity 152
InAs 409, 625
InAs/AlSb 239
InAs/GaSb 207, 256, 264
Incompressibility 16
Infrared magneto-transmission 565
Inhomogeneities 23
InP 203
Integer quantum Hall effect 52

Kondo effect 165
Kondo resonance 182

Landau levels 507
Lateral superlattices 28, 273, 405
Lead telluride 600
Level statistics 591
LO-phonon frequency 625
Local magnetic field 392
Localization 441
Localization length 466
Localized excitons 363

Magnetic and electric modulation 28, 375
Magnetic barrier 392
Magnetic breakdowns 225
Magnetic confinement 186
Magnetic fields 194, 283, 351, 356, 384, 449, 477
Magnetic field suppression 582
Magnetic ions 577
Magnetic levitation 618
Magnetic resonance 649
Magnetic semiconductors 548, 561
Magnetically modulated systems 405
Magnetically-induced Wigner solid 587
Magnetization 16, 152
Magnetoconductance 607
Magnetoexciton 323
Magneto transport 60, 600
Magneto-exciton 490
Magneto-optics 300
Magneto-optical spectroscopy 308
Magneto-photoluminescence 367
Magneto-resistance 273

Magneto-thermopower 198
Magneto-transport 260
Magnetophonon resonance 625
Magnetoplasmons 220, 335, 645
Magnetoresistance 207, 243, 248, 380, 392, 413, 621
Magnetoroton 36
Magnetospectroscopy 481
Magnetotransport 28, 252, 264, 388, 397, 409, 486, 595, 633
Many–body effects 186, 462, 507
Many-electron effects 431
Megagauss magnetic fields 178, 565, 659
Mesoscopic physics 173
Mesoscopic systems 65, 413, 514, 610
Metal–insulator transition 417, 595, 600, 604, 607
Microcavity 351
Millimetre-wave techniques 649
Miniband 544
Minigap 207, 256, 264
Mixing 161
Multi-atomic step 273
Multi-layer systems 97
Multi-quantum wells 527
Multi-subband systems 401
Multifractality 65
n-GaAs 654

Nanomagnetometry 380
Negatively-charged excitons 323, 327, 470
Network model 161
NMR 104, 113, 121
Noise 69
Nonlinear effects 514
Nonlinear transport 233, 356
Nuclear spins 82, 90
Numerical analysis 409

Optics 283
Organic molecular metals 649

Parabolic quantum wells 248, 252, 401
Parallel magnetic field 256
Periodic orbit theory 388
Phase coherence phenomena 401
Phase transition 90
Phonon 449
Phonon spectroscopy 36
Photoluminescence 178, 203, 319, 327, 347
Photon 449
Photon-assisted tunneling 165
Photonic dot 351
Polariton 351
Polaron effect 457
Polarons 367
Pressure 347
Pulsed magnetic fields 203, 327, 339

Q1D organic conductor 633
QHE 16, 591
Quantized Hall resistance 56
Quantum dots 141, 147, 152, 157, 165, 173, 178, 182, 186, 190, 194, 203, 308, 424, 507
Quantum Hall effect breakdown 47
Quantum Hall effect 1, 8, 43, 56, 60, 65, 74, 78, 97, 130, 207, 215, 279, 319, 417, 441, 457, 514, 535, 600
Quantum phase transition 52
Quantum point contact 384
Quantum rings 424
Quantum states 186
Quantum transport 629
Quantum wells 86, 178, 279, 308, 319, 367, 445, 477, 486, 557, 600
Quantum wires 69, 308
Quasi-one-dimensional Heisenberg antiferromagnet 637

Rabi splitting 331
Radiative decay rate 331
Raman scattering 625
Random matrix theory 198
Relaxation times 527
Renormalization group 65
Resistivity 23
RKKY interaction 573

Scaling theory 74
Second spectra 69
Self-assembled quantum dots 169, 300
Self-organized nanostructures 424
Semiconductor heterostructures 225, 339
Semiconductor microcavity 331
Semiconductor quantum well 384
Semiconductors 604
Semiconductor–semimetal 264
Shake-up excitations 462
Shubnikov–de Haas effect 248, 503
$Si_{1-x}Ge_x$ 363
Silicon–germanium 260
Single barrier 531
Single-electron transistor 1
Single quantum dot spectroscopy 169
Singlet–triplet transition 173
Skyrmions 90, 136, 141, 347
Spectroscopy 424

Spin blockade 194
Spin exchange 130
Spin polarization 474, 577
Spin splitting 182, 239, 561
Spin transition 82
Spin 86, 157, 194
Spin–orbit interaction 641
Strong ac 356
Strong dc 356
Subband–Landau level coupling 343
Superconductivity 610
Superlattices 233, 540, 544, 548
Surface acoustic waves 215

Terahertz 268
Thermopower 23
Tilted magnetic field 239, 343
Time-resolved photoluminescence 466, 470
Tomonaga–Luttinger liquid 125
Transition metals 629
Transport 23
Tri-layer structure 573
Trion 136, 466
Tuned Zeeman splitting 577
Tunneling 452, 507, 519, 523, 527, 531, 535, 561
Two-dimensional electron gas 16, 86, 136, 268, 279, 283, 462
Two dimensional electron systems 449, 582, 604
Two-dimensional hole system 363
Type II 363

Valence-band coupling 190
Valley splitting 260
Vicinal substrates 243
Vortices 610

Zeeman effect 157
Zeeman splitting 169
ZnSe quantum well 323
